Sites

Help for this Page

What is a Site?

Salesforce sites enables you to create public websites and applications that are directly integrated with your Salesforce.com organization—without requiring users to log in with a username and password. You can publicly expose any information stored in your organization through pages that match the look and feel of your company's brand. Use sites to create public community sites to gather customer feedback, branded login and registration pages for your portals, Web forms for capturing leads, and so on.

Because sites are hosted on Salesforce servers, there are no data integration issues. And because sites are built on native Visualforce pages, data validation on collected information is performed automatically. You can allow users to access your site through your unique Salesforce domain and URL, or you can register your own branded domain or subdomain to redirect to your site.

Create multiple sites that appeal to different audiences and satisfy your company's various business needs. For example, a software company could create one site for new developers, another for customers, and a third for marketing.

Sample Domain Name

avsenineeringcollege2-dev-ed.develop.my.salesforce-sites.com

Sample sites URLs

avsenineeringcollege2-dev-ed.develop.my.salesforce-sites.com/customers

avsenineeringcollege2-dev-ed.develop.my.salesforce-sites.com/developers

avsenineeringcollege2-dev-ed.develop.my.salesforce-sites.com/partners

Your Salesforce site domain name is avsenineeringcollege2-dev-ed.develop.my.salesforce-sites.com

The screenshot displays the Salesforce Setup interface for the 'Sites' configuration. The left-hand navigation pane includes sections for 'User Interface', 'Sites and Domains', and 'Security'. The 'Sites and Domains' section is expanded, with 'Sites' selected. The main content area is titled 'SETUP Sites' and features a diagram illustrating the relationship between a 'Sample Domain Name' and 'Sample sites URLs'. The domain name is 'avsengineeringcollege2-dev-ed.develop.my.salesforce-sites.com', which maps to three URLs: 'customers', 'developers', and 'partners'. Below the diagram, a message states: 'Your Salesforce site domain name is avsengineeringcollege2-dev-ed.develop.my.salesforce-sites.com'. Under the 'Settings' section, a yellow banner indicates that the settings affect all Salesforce sites. A checkbox labeled 'Allow using standard external profiles for self-registration, user creation, and login' is checked. At the bottom, a table lists the configured sites.
